

MEMORANDUM

To: County of Riverside

From: Iteris, Inc.

Date: June 2, 2025

RE: Cajalco Road Widening and Safety Enhancement Project – **Draft** Traffic Operations Validation

INTRODUCTION

This memorandum describes a traffic operations validation analysis in relation to the Cajalco Road Widening and Safety Enhancement project in the County of Riverside. The Draft Environmental Impact Report/Environmental Impact Statement/Section 4(f) (DEIR/EIS) for the Cajalco Road Widening and Safety Enhancement project (herein referred to as the "Cajalco Road Widening Project") was completed in 2021. The project team presented the project to the SCAG Transportation Conformity Working Group (TCWG) in April 2025. During the meeting, the TCWG requested further detailed analysis of traffic operations at a sub-set of intersections along Cajalco Road, to investigate whether more recent results would still be consistent with the results in the 2021 DEIR/EIS.

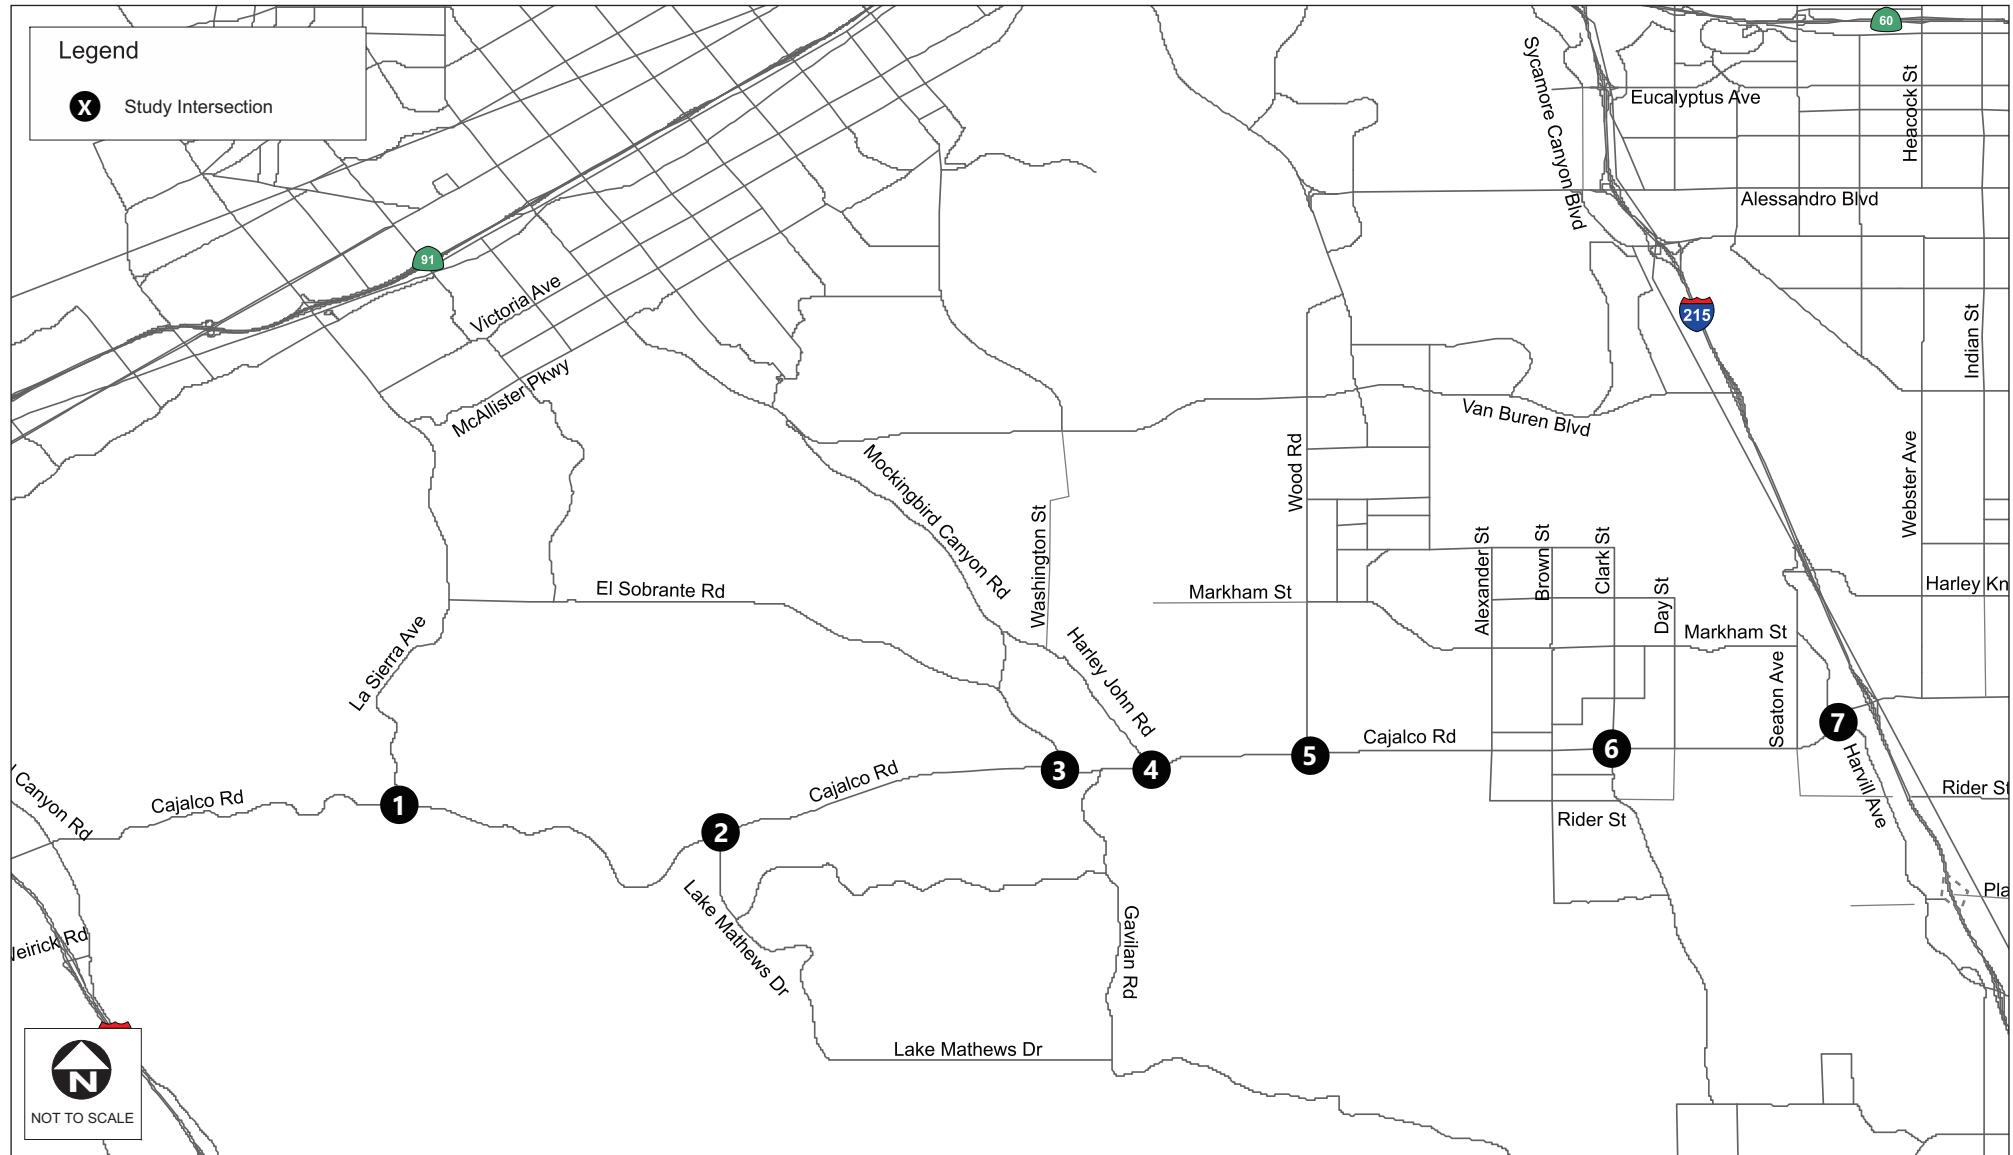

Thus, the purpose of this assessment is to address the TCWG comments by providing a comparison of the 2021 DEIR/EIS' Traffic Operations Analysis Report's intersection levels of service to levels of service utilizing 2025 traffic counts and more recently updated travel-demand models used in Riverside County, in order to assess whether the 2021 DEIR/EIS results can still be considered reasonable.

DATA COLLECTION

In order to establish baseline conditions, new traffic counts were collected at a sub-set of intersections along Cajalco Road. Traffic counts were collected in April 2025, on a typical weekday, at seven (7) intersections along the Cajalco Road Widening Project corridor. The selected locations are as follows:

1. La Sierra Avenue/Cajalco Road;
2. Lake Mathews Drive/Cajalco Road;
3. El Sobrante Road/Cajalco Road;
4. Harley John Road/Cajalco Road;
5. Wood Road/Cajalco Road;
6. Clark Street/Cajalco Road; and
7. Harvill Avenue/Cajalco Road.

Detailed traffic count data sheets are provided in **Appendix A** and **Figure 1** shows the locations of the intersections.

TRAFFIC OPERATIONS ANALYSIS

This section presents a discussion of the methodology used for the traffic operations analysis, as well as the existing and future year with project traffic operations results at the study intersections.

Analysis Methodology

This section discusses the methodology used in the intersection operational analysis. The quality of traffic operations is characterized using the concept of level of service (LOS). Level of service is defined by a range of grades from A (best) to F (worst). At intersections, LOS "A" represents relatively free flow operating conditions with little or no delay. LOS "F" is characterized by extremely unstable flow conditions, severe congestion and delays with traffic volumes at or near the intersection's design capacity. This typically results in long vehicular queues extending from all approaches of an intersection.

LOS analysis is performed using the Highway Capacity Manual (HCM) methodology, which uses vehicular delay criteria to determine LOS. The LOS was calculated by utilizing Synchro software. **Table 1** presents a brief description of each level of service letter grade.

Table 1: Intersection Level of Service Definitions – HCM Methodology

Level Of Service	Description	Signalized Intersection Delay (seconds per vehicle)	Unsignalized Intersection Delay (seconds per vehicle)
A	Excellent operation. All approaches to the intersection appear quite open, turning movements are easily made, and nearly all drivers find freedom of operation.	≤ 10	≤ 10
B	Very good operation. Many drivers begin to feel somewhat restricted within platoons of vehicles. This represents stable flow. An approach to an intersection may occasionally be fully utilized and traffic queues start to form.	>10-20	>10 and ≤ 15
C	Good operation. Occasionally drivers may have to wait more than 60 seconds, and back-ups may develop behind turning vehicles. Most drivers feel somewhat restricted.	>20-35	>15 and ≤ 25
D	Fair operation. Cars are sometimes required to wait more than 60 seconds during short peaks. There are no long-standing traffic queues.	>35-55	>25 and ≤ 35
E	Poor operation. Some long-standing vehicular queues develop on critical approaches to intersections. Delays may be up to several minutes.	>55-80	>35 and ≤ 50
F	Forced flow. Represents jammed conditions. Backups from locations downstream or on the cross street may restrict or prevent movement of vehicles out of the intersection approach lanes; therefore, volumes carried are not predictable. Potential for stop and go type traffic flow.	>80	> 50

Existing Conditions

Existing intersection operations were evaluated during the a.m. and p.m. peak hours at the study intersections. **Figure 2** presents the a.m. and p.m. peak hour volumes at the study intersections. **Table 2** summarizes the existing LOS at the study intersections. LOS calculation sheets are provided in **Appendix B**.

Table 2: Existing Intersection Peak Hour Level of Service

Intersection	Control Type	AM Peak Hour		PM Peak Hour	
		Delay (s)	LOS	Delay (s)	LOS
1 La Sierra Ave/Cajalco Rd	Signalized	25.3	C	39.4	D
2 Lake Mathews Dr/Cajalco Rd	TWSC*	128.2	F	15.8	C
3 El Sobrante Rd/Cajalco Rd	Signalized	14.6	B	26.0	C
4 Harley John Rd/Cajalco Rd	Signalized	45.0	D	46.9	D
5 Wood Rd/Cajalco Rd	Signalized	24.7	C	20.0	B
6 Clark St/Cajalco Rd	Signalized	32.2	C	29.5	C
7 Harvill Ave/Cajalco Rd	Signalized	34.9	C	26.2	C

Notes:

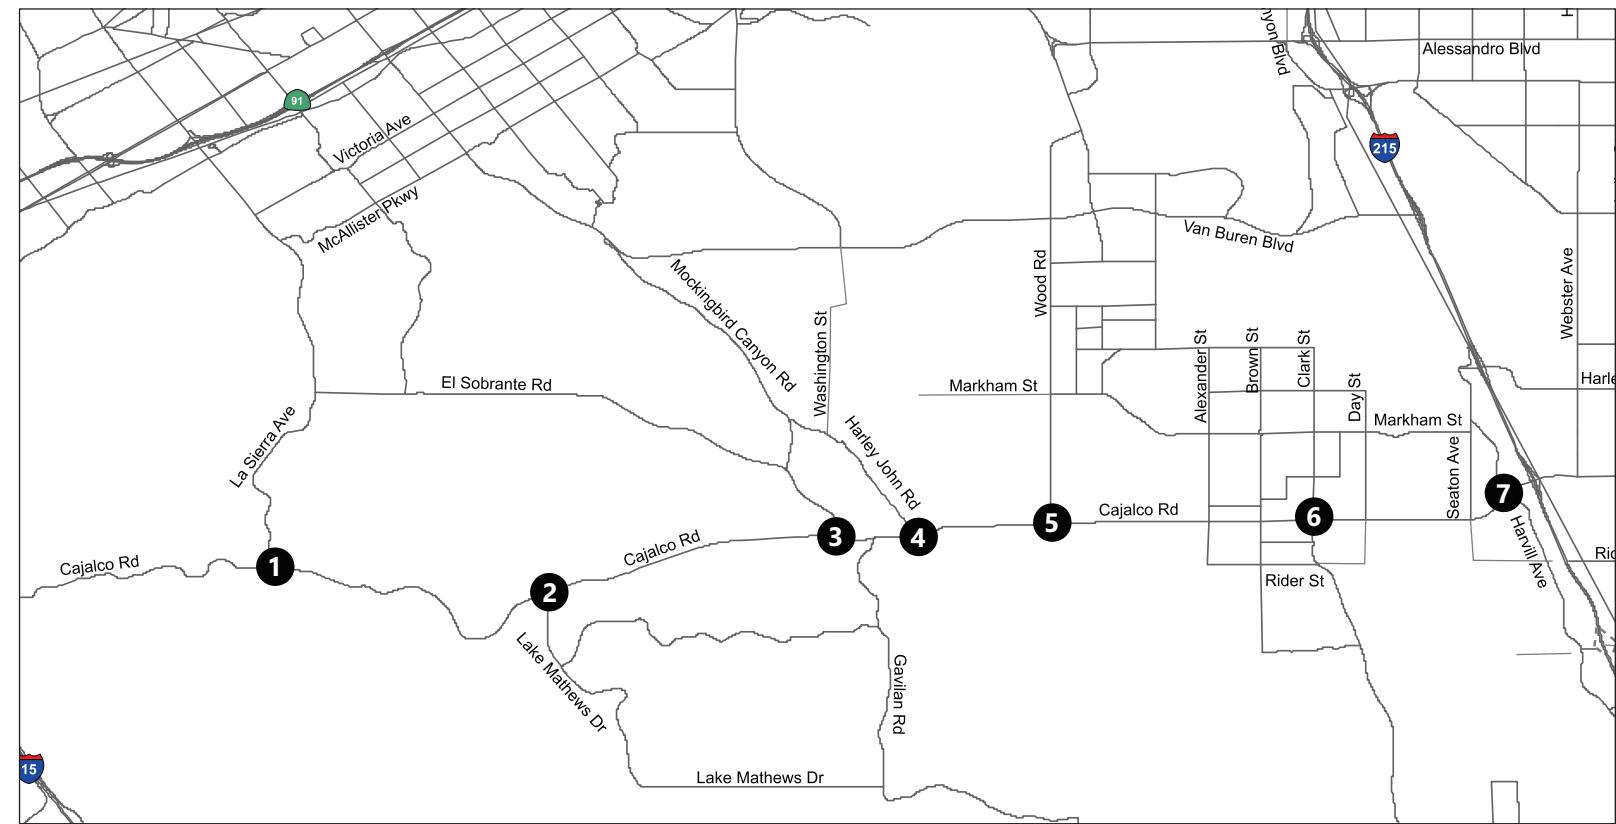

s = seconds, LOS = Level of Service

* Two-way stop controlled intersection: worst operating approach is reported.

As shown in **Table 2**, all signalized intersections operate at LOS D or better during both the a.m. and p.m. peak hours. The Harley John Road/Cajalco Road intersection is the busiest intersection, operating at LOS D during both peak hours.

The Lake Matthews Drive/Cajalco Road intersection is unsignalized, with the northbound approach controlled by a stop sign. This approach operates at LOS F with a delay of 128.2 seconds during the a.m. peak hour. The high delay is due to the a.m. peak hour volume exceeding 400 vehicles per hour, which exceeds the capacity of a one-lane stop-controlled approach.

1. Arroyo Pkwy & Cajalco Rd	
100/251 ↑ 192/533 →

Future Year 2048 Conditions

Future year 2048 conditions were evaluated assuming the Cajalco Road Widening and Safety Project's Alternative 1 conditions (as described in the 2021 DEIR/EIS). This scenario assumes widening of Cajalco Road from a current two-lane roadway to a four-lane roadway. Future year traffic volumes were derived using the latest version of the RIVCOM model. This model is currently the most up-to-date travel-demand model in the region, utilizing a base year of 2018 and future/horizon year of 2045.

The RIVCOM was used to generate link-level peak hour volumes (for existing and future scenarios), which were then "post-processed" to derive future year turning movement volumes, using existing (2025) turning movements as a pivot point. The future year 2048 with project peak hour intersection volumes are provided in **Appendix C**. Note that the RIVCOM modeling used in this analysis does not include the Community Environmental Transportation Acceptability Process (CETAP) western transportation corridor project (between I-15 and I-215) in the future year scenario. The CETAP project is not considered realistic to be built at the moment, and assuming completion of the project would result in large shifts in vehicle traffic off of Cajalco Road. Thus, the traffic forecasting as part of this analysis is considered conservative in terms of vehicle volume growth along Cajalco Road. If the CETAP project was assumed to be completed in the RIVCOM future year scenario, future year traffic volumes and intersection LOS would be lower than the values described in this section.

Utilizing the future year traffic volumes and the improved/widened lane configurations and traffic control included as part of the project's Alternative 1 scenario, future year 2048 intersection operations were evaluated during the a.m. and p.m. peak hours. **Table 3** summarizes the future year 2048 with project LOS at the study intersections. LOS calculation sheets are provided in **Appendix B**.

Table 3: Future Year 2048 With Project (Alternative 1) Intersection Peak Hour Level of Service

Intersection		Control Type	AM Peak Hour		PM Peak Hour	
			Delay (s)	LOS	Delay (s)	LOS
1	La Sierra Ave/Cajalco Rd	Signalized	33.2	C	64.2	E
2	Lake Mathews Dr/Cajalco Rd	Signalized	41.6	D	6.6	A
3	El Sobrante Rd/Cajalco Rd	Signalized	16.0	B	17.4	B
4	Harley John Rd/Cajalco Rd	Signalized	58.7	E	35.1	D
5	Wood Rd/Cajalco Rd	Signalized	17.7	B	14.9	B
6	Clark St/Cajalco Rd	Signalized	46.2	D	38.9	D
7	Harvill Ave/Cajalco Rd	Signalized	54.8	D	46.2	D

Notes:

s = seconds, LOS = Level of Service

As shown in **Table 3**, all but two signalized intersections operate at LOS D or better during both the a.m. and p.m. peak hours. While volumes are anticipated to increase from 2025 to 2048, the widening of Cajalco Road from two lanes to four lanes would help increase capacity and maintain the same LOS as the existing conditions in 2025. The La Sierra Avenue/Cajalco Road intersection is forecast to operate at LOS E during the p.m. peak hour due to increased delays in the westbound and southbound approaches. The

Harley John Road/Cajalco Road intersection is forecast to operate at LOS E during the a.m. peak hour primarily due to increased volumes and delays in the westbound approach.

Table 4 shows the comparison of intersection LOS results from the 2044 with Alternative 1 scenario in the 2021 DEIR/EIS and the current LOS forecast shown in Table 3.

Table 4: LOS Comparison – 2044 Alternative 1 vs 2048 Alternative 1

Intersection	AM Peak Hour		PM Peak Hour	
	2044 Alt 1 Delay – LOS	2048 Alt 1 Delay – LOS	2044 Alt 1 Delay – LOS	2048 Alt 1 Delay – LOS
1 La Sierra Ave/Cajalco Rd	25.0 – C	33.2 – C	95.0 – F	64.2 – E
2 Lake Mathews Dr/Cajalco Rd	18.7 – B	41.6 – D	15.3 – B	6.6 – A
3 El Sobrante Rd/Cajalco Rd	9.3 – A	16.0 – B	11.1 – B	17.4 – B
4 Harley John Rd/Cajalco Rd	158.5 – F	58.7 – E	186.1 – F	35.1 – D
5 Wood Rd/Cajalco Rd	23.4 – C	17.7 – B	26.2 – C	14.9 – B
6 Clark St/Cajalco Rd	49.3 – D	46.2 – D	128.7 – F	38.9 – D
7 Harvill Ave/Cajalco Rd	26.8 – C	54.8 – D	30.8 – C	46.2 – D

Notes:

s = seconds, LOS = Level of Service

As shown in **Table 4**, the new future year 2048 with project traffic operations are generally consistent with the level of service results projected in the 2021 DEIR/EIS's future year 2044 with project scenario, with overall vehicle delay lower than those presented in the 2021 DEIR/EIS.

CONCLUSIONS

This memorandum presented a traffic operations validation analysis, in relation to the Cajalco Road Widening and Safety Enhancement Project in the County of Riverside. The following are the results of the analysis:

- The Cajalco Road intersections evaluated as part of this analysis currently operate at LOS D or better during both a.m. and p.m. peak hours (using 2025 traffic count data), with the exception of the Lake Mathews Drive intersection which is unsignalized. Thus, only the delay associated with the stop-controlled movement (northbound Lake Mathews Drive) is presented, as opposed to the average delay of all vehicles proceeding through the intersection.
- In the future year 2048 with project scenario, all but two signalized intersections operate at LOS D or better during both the a.m. and p.m. peak hours. The La Sierra Avenue/Cajalco Road intersection is forecast to operate at LOS E during the p.m. peak hour and the Harley John Road/Cajalco Road intersection is forecast to operate at LOS E during the a.m. peak hour.
- The new future year 2048 with project traffic operations are generally consistent with the level of service results projected in the 2021 DEIR/EIS's future year 2044 with project scenario, with

overall vehicle delay lower than those presented in the 2021 DEIR/EIS.

This analysis shows that the use of more up-to-date traffic data (2025 traffic counts) and traffic forecast modeling (RIVCOM) methods are not forecast to result in new traffic impacts at intersections along Cajalco Road, as compared to the findings in the 2021 DEIR/EIS. Thus, it can be concluded that the traffic operations findings in the 2021 DEIR/EIS would still be valid.
